

Helpful Hints for Physics TAG Submissions

1. Have a week-by-week list of topics both for the class and the laboratories. When doing Q2S, a year-long class should meet the same number of times per week regardless of whether it is in 3 quarters or 2 semesters, unless there is a good pedagogical reason for change.
2. Q2S should be neutral to students: They should be able to attain the same outcomes. It should not cost them more; they should have the same contact with faculty.
3. Learning outcomes should be objectives, not just a list of topics. Make it clear what the student is expected to do.
