

**Profile of Recent High School Graduates Enrolled
as First-Year College Students**

Fall 2001 to Fall 2005 by High School District

Prepared by

OHIO BOARD
OF REGENTS

June 2007

Notes on Interpretation of Results

Data presented in these reports should be interpreted with a certain degree of caution. Due to data availability and other issues, the reported outcomes do not apply to the entire group of high school graduates from a district or a high school. Furthermore, the numbers of students on which the statistics are calculated must be taken into account when drawing conclusions about the results.

Cohorts and Outcomes Measures

Each set of outcomes presented in this report is based on a different set of students.

The first set of indicators, labeled *'Participation'*, measures the percent of high school graduates enrolled in any public or private college in Ohio. Data on out-of-state college attendance at the district and high school level is unavailable.

The data for the second set of indicators, *'Preparation'*, are available only for those students who took the ACT or SAT college entrance exams. The course-taking data reported here come from surveys that students complete when they register for those exams.

The third set of indicators, *'Remedial Course Enrollment'*, is available only for students attending public colleges or universities.

The final set of indicators, *'Remedial Math and English Enrollment by Level of High School Preparation'*, is available only for students who both enrolled in a public college or university in Ohio and who took the ACT or SAT.

Small Numbers Issues

Results for high schools and districts with very few graduates enrolled in college tend to fluctuate widely from year to year. For those types of high schools and districts, the five-year average is a more accurate representation of outcomes. In all cases, if the denominator for any calculation is smaller than six, the results are omitted both to avoid statistical errors and for confidentiality purposes.

Districts or high schools with fewer than 10 college students in any year from 2001 to 2005 have been omitted from the report.

Accuracy

We have made significant efforts to review these results for reasonableness and accuracy. However, there are roughly 600 K-12 districts and 1,000 high schools in Ohio. Given the numbers of districts and high schools and the wide variety of outcomes, we appreciate the close review of these results by those who are most familiar with these local outcomes.
