

Employment Outcomes for Graduates of Ohio Higher Education Institutions: Spring Graduating Classes of 1999 through 2003

May, 2005

Contents

Notes on Data Sources and Interpretations of Results

Tables 1A through 1C: Retention and Average Salary All Years Combined
Spring Graduates, 1999 - 2003

Table 1A. By Degree Level and Residence (1 page)

Table 1B. By Degree Level, Discipline Area, and Residence (4 pages)

Table 1C. By Degree Level, Subject, and Residence (26 pages)

Tables 2A through 2C: Retention and Average Salary Tracking Spring 1999 Graduates

Table 2A. By Degree Level and Residence (1 page)

Table 2B. By Degree Level, Discipline Area, and Residence (3 pages)

Table 2C. By Degree Level, Subject, and Residence (14 pages)

Tables 3A through 3B: First-Year Retention and Average Salary, 1999 through 2003

Table 3A. By Degree Level and Residence (1 page)

Table 3B. By Degree Level, Discipline Area, and Residence (3 pages)

1. Source of Graduates' Employment and College Attendance Data

Each year, the Board of Regents conducts an employment data match with the Ohio Department of Jobs and Family Services (ODJFS). Employment data for the 4th quarter of each calendar year is collected for three types of students: currently enrolled fall term students, graduates of the most recent spring term, and graduates of spring terms for prior years going back to 1998.

The employment data match is conducted for the 4th quarter because the 4th quarter is six months after the end of the spring term. The employment outcomes "window" needs to occur at a fixed time following graduation for all graduates..

Graduates are also matched against the student enrollment records maintained by the Ohio Board of Regents to determine if a graduate enrolled in public higher education during the academic year following graduation.

2. Limitations of the Data Matching Process

a. At best, employment and school attendance outcomes are captured only if a graduate works or goes to college within Ohio. To the extent that graduates leave Ohio to work, these results present an incomplete picture of employment outcomes.

b. Attendance at independent colleges and universities is captured only if the student enrolls full-time and is a recipient of an Ohio Choice Grant. To the extent that graduates attend independent institutions on a part-time basis, post-graduation college attendance is understated.

c. The percentage of graduates reported to be working in Ohio is a lower bound estimate of graduates' Ohio employment outcomes. Employment for graduates who are self-employed or working for the federal government is not recorded in the ODJFS employment files. Also, the employment outcomes for graduates living in Ohio but working in border states are not reflected. So, for example, civilian employees of Wright-Patterson Air Force Base are not included in the ODJFS employment data files.

3. Data Notes and Earnings Calculation Methods

- a. Residency status for graduates is determined by the "State of Residency" field in the Student Entrance (SE) file.
- b. The ODJFS employment files contain information on earnings for the quarter, but not information on weeks worked or hours worked. The estimates of average salaries for "full-time" workers are obtained by making an assumption that workers earning \$4,000 or more per quarter have full-time jobs. Annual earnings are estimated by multiplying the 4th quarter earnings by four.
- c. This report presents results at a greater level of institutional and degree field detail than has been previously reported. In some of the tables, results for all graduating classes from spring 1999 to spring 2003 have been combined in order to have sufficient numbers for reporting purposes.
- d. The "small numbers" problem that occurs when results are presented by institution (available upon request) and detailed degree field has been dealt with in two ways. First, no results are reported for any cells with fewer than six observations. Second, results for average salaries are accompanied by information on the standard error of the mean salary. The 95% confidence interval for the average salary is plus or minus two standard errors from the average salary. Users of this report are urged to be cautious when interpreting average salary results when the standard error is large relative to the average salary.
